

## AP TOWERS

### MYANMAR

#### Telecom Towers & Infrastructure

##### AP Towers' Goal

To be the **number one** tower company in Myanmar

##### The Challenge

To protect AP Towers sites and serve customers with a better and scalable access control solution.  
To eliminate the challenges associated with key management.

##### The Solution

Sera4 padlocks on perimeters and shared assets on each tower site provides the physical access control. The Teleporte keyless access platform completes the solution from the cloud, so that all access is keyless through mobile phone digital credentials.

##### The Benefits

AP Towers key management and site visit operations are more efficient and their sites are more secure. The access logs provide provided additional opportunity for billing reconciliation and better profiling of their maintenance activities.

**SECURITY | RELIABILITY | SCALABILITY**

“ The most compelling feature (of Teleporte) is the use of a mobile application to lock and unlock the padlock. This eliminates the use of physical keys. The mobile app also eliminates the challenges associated with key management. When users request a key from the Operation Centre, it's easy to issue an electronic key via Teleporte and provide the appropriate access. ”

- Paul Jacob, Operations Manager at AP Towers, February 2022
